

Make your old bathtub new again!

Reducing waste is good for the Earth too!

When your bathtub starts to show signs of wear, it's time for environmentally-friendly "Polishing Restoration"!!

What is the "Refresh Bath Construction Method"?

This is a revolutionary bathtub refinishing method, which combines surface polishing with a long-lasting glass coat.

First, we *polish* the surface with our patent-pending polishing technology. Then we apply a durable *glass coat* for long-lasting, like-new finish. With no need to dismantle and dispose the bathtub, and no chemical paints to dry, this process minimizes noise and odors. Low-cost and environmentally-friendly, you might not recognize your old bath after it has been Refreshed!

Before Polishing

Over the years, the bathtub surface has become covered with small scratches, creating a rough, unpleasant touch. The uneven surface harbors stubborn dirt deposits.

Worn and scratched surface harbors dirt and is unpleasant to the touch

Polishing

Our experienced refinishers use multiple techniques to polish the bathtub on a microscopic scale, removing even invisible water scales and dirt.

Remove residue and polish the surface to silky smoothness.

Glass Coating

We apply a highly-durable glass coat, which adheres to the microscopic indentations and forms a smooth and extremely strong surface. The new surface repels dirt and has a luxurious shine.

Surface completely treated with strong coating, for long-lasting shine.

For Hotel, Apartment, and Housing Property Managers

Can we help with any of these problems?

Unremovable dirt or mold?

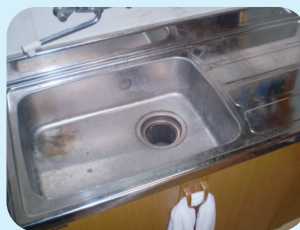

Stubborn water stains?

New fixtures quickly lose their shine?

Some Examples of the Refresh Bath Process

▲23-year-old Enamel Bathtub
(finished with acrylic polymer)

Even steel sinks battered and stained from many years of hard use can be polished to shine like new.

Refresh Bath can also treat:

- Sink bowls and vanities
- Kitchens ● Synthetic Marble
- Enameled Panels ● Glass
- Marble ● Stainless Steel
- Toilets ● Bathtubs ● FRP

Treating may not be possible for chipped, cracked, or other damaged surfaces.

Example Pricing

Basic Plan= **Bathtub** + **Tub Apron** + **Wet Room Special Process Polishing & Caulking**

Approximate Pricing based on Bathroom Area
(Prices are before tax)

2.5 m² <100,000 yen>
3.3 m² <110,000 yen>
4.1 m² <120,000 yen>
(prices are approximate)

We will inspect the site to determine if polishing is possible, and if any repairs are necessary, before offering a final quotation.

We also offer repair work, and options such as mirror and tap polishing.
